Enhanced Performance and Protection for your Compressed Air and Gas System.

Three sizes of “T” type housings designed for flows to 100 scfm at 100 psig. Fabricated using epoxy coated aluminum for the 35 and 60 scfm sizes and epoxy coated carbon steel for the 100 scfm size. Designed specifically for use with PPC high performance air and gas filter cartridges.

APPLICATIONS

For use as coalescing or particulate filter housings for compressed air to 150 psig. May be used as pre- and after-filters for all dryers or as point-of-use filters for controls, instruments, and equipment.

FEATURES AND BENEFITS

- Drop away canister access for simple element change-out.
- Stainless steel V-band locks head to housing with captive seal for removal and attachment.
- Buna N O-ring seals prevent leakage paths which permit contamination downstream.
- Corrosion resistant coatings for longer housing life.
- Low housing ΔP saves dollars (1-psi pressure drop costs, on average, $78 per year per 100 scfm at 7¢ per kwh).
- Single cartridge design for easy, rapid filter change-out.
- ¼” NPT drain port enables housings to be used without expensive after-purchase modification.
- In-line connection style accommodates easy replacement of existing hardware.
- Slip-on or tie-on construction allows easy element change-out.
- High element surface area yields long service life (typically 1+ years)
- Particulate removal - 0.9µm absolute
  0.07µm 98% efficiency
